

Statement of Work

Rescue Watercraft – Jet Skis and Trailer

1.0 General Information

1.1 Scope

The United States Secret Service has a requirement for two (2) training/operational rescue watercrafts (Jet Skis) and dual trailer to enhance safety / security for protective assignments on the water. Operation of these watercrafts in a rescue capacity mandates a specialized set of skills.

1.2 Background

The mission of the U.S. Secret Service Rescue Swimmer Program is to train and prepare special agents to perform the necessary advanced rescue skills required during protective missions around various aquatic environments. Many of our protectees participate in water-related activities with their families, and attend official functions on or near marine environments. These activities have exposed our rescue swimmers to the unique and vital implementation of rescue watercraft (RWC) as rescue platforms. For example, our rescue swimmers who travel with former President Obama and his family in Hawaii have partnered with local police and rescue agencies (Hawaii Department of Land and Natural Resources, City & County of Honolulu Ocean Rescue, Kaneohe Bay Lifeguards) that utilized RWC with attached rescue sleds. Our rescue swimmers are given a very brief familiarization course on how to use RWC as a rescue tools. This instruction is given when the swimmers arrive on scene usually one (1) day prior to the protectee(s) arrival. Our rescue swimmers rely on this quick training in the event that our protectees or their guests become distressed in the water and the rescue swimmer calls for the deployment of the RWC.

President Trump and his family spend several weeks throughout the year in Mar-a-Lago FL and Hamptons NY. The First Family is very active in water sports. Several family members along with their guest participate in open water activities for which USSS Special Agent Rescue Swimmers are responsible. SA's have rented watercraft with their own personal funds to allow them to be near our protectees in various water environments to fulfil the USSS Rescue Swimmer mission.

The United States Secret Service Rescue Swimmer Program has implemented RWC training into the basic rescue swimmer school. The program currently receives RWC training from Kitty Hawk Ocean Rescue in Kitty Hawk, NC. This is a one (1) day course that delivers excellent training. However, a three (3) or four (4) day in-service course provided by Secret Service Rescue Swimmer instructors is more appropriate to become a proficient operator/rescuer on a RWC in different types of marine environments and conditions. Obtaining two (2) RWC as training and

operational tools would allow continued in-service training for our current and active swimmers as well as our new candidates.

The Rescue Swimmer Program is requesting two (2) RWC which will be outfitted with rescue sleds (in a separate purchase) that will be used by USSS Rescue Swimmers as training tools, as well as assets that can be used on a variety of protective missions, as needed. Logistically, the RWC will be transported via trailer(s) (towed by a vehicle or transported on military aircraft in support of the protective detail).

1.3 Government Furnished Property

None

1.4 Place of Performance

The rescue watercrafts will be stored at the James J Rowley Training Center Beltsville, MD.

1.5 Travel

None

1.6 Security

None

2.0 Specific Requirements

2.1 Dimensions

Rescue Water Crafts:

- 122.8L x 46.5W (IN)
- Max weight 900 lbs

Dual Jet Ski Trailer:

- 98" x 16'8
- Minimum capacity 2200lbs

2.2 Power

4 Stroke 4 cylinder 1498cc

2.3 Accessories

Dual Trailer

Rescue board (separate order)
